

PRODUCT NEWS UPDATE

Attention Scientists

CELL's Product News Update section features the latest information on bio-research products, services, books, and equipment.

Additional free information on these advertised products and services can be obtained by circling the appropriate reader service number on the postage-paid reply card in the front of the journal or by faxing your request directly to the company using the fax form found at the end of the Product News Update section.

MONOCLONAL ANTIBODIES

- Therapeutic Drugs • Infectious Disease Agents
- Coagulation Factors • Hormones and Serum Proteins
- Enzymes and Inhibitors

Go Germline!

...when you make your knockouts with Embryonic Stem (ES) cells and Mouse Embryo Fibroblasts (MEF) from Genome Systems, Inc.

Making a mouse knockout involves months of hard work. But all that work can be wasted if you don't start with a strong foundation. You need high quality ES cells that will go germline after blastocyst injection and MEF cells to maintain ES cells in their pluripotent state.

Genome Systems, Inc., has contracted with a major facility to offer you the cells you need to generate knockouts. Our ES cells and MEF cells are fully characterized with a strong proven record of success.

MULTIPLE CHOICE
for DNA Sequencing & Genetic Analysis

- ✓ **4000LS LONG READIR™**
 - 800-1000 bases per sample (typical for ss templates).
 - Multitasking software — operate three sequencers on one computer.
- ✓ **4000S**
 - 550 bases per sample with 99% accuracy (typical for ss templates).
 - High sequencing throughput on shorter fragments.
- ✓ **4000LX**
 - Combines a Model 4000L, a Model 4000 and one computer.
 - Each sequencer is operated independently.

Choose a LI-COR infrared sequencer for high productivity sequencing, genetic analysis, or extra long reads to close gaps between contigs. Or, combine a system for all three applications!

**JOURNAL OF
CHEMICAL
NEUROANATOMY**

Editor:

H.W.M. Steinbusch,
Department of
Neuropsychology and
Psychobiology, State
University of Limburg,
Postbus 616,
6200MD Maastricht,
The Netherlands

AIMS AND SCOPE

The *Journal of Chemical Neuroanatomy* is a vehicle for the publication of scientific reports relating to the functional and biochemical aspects of the nervous system with this microanatomical organization. The scope of the journal concentrates on reports which combine microanatomical, biochemical, pharmacological and behavioural approaches.

The journal's high quality is reflected in the modern methodology research in molecular neuroanatomy and neurochemistry, and in its impact factor (3.354 in 1992). The editors and editorial board members are internationally renowned scientists.

ABSTRACTED/INDEXED IN:

BIOMED Database, BIOSIS, CAB Abstracts, Cambridge Scientific Abstracts, Chemical Abstracts, Current Awareness in Biological Sciences, Current Contents (CC)-Life Sciences, Excerpta Medica (EMBASE), Index Medicus, National Library of Medicine (MEDLARS and MEDLINE), Reference Update, Research Alert (ISI), SCISEARCH Database (ISI), Science Citation Index (ISI).

SUBSCRIPTION INFORMATION:

1995 Volumes 9-10 (in 8 issues), Subscription price: Dfl. 1070.00 (US\$578.00) including postage and handling. ISSN 0891-0618

Live-Cell Microscopist!

Ensure the viability of your cells & accuracy of your data. Take advantage of the first-surface thermal transfer technology that offers convenience, economy, versatility & optical superiority over traditional live-cell microscopy environmental control methods!

FCS2 Closed Chamber micro-environmental system includes patented microaqueduct perfusion, first-surface thermal transfer, a three channel controller and objective heater for high N.A. applications!

- Uniform temperature transfer direct to cells
- Temperature stabilization in seconds
- Compatible with all modes of light microscopy
- Laminar flow perfusion w/low cell surface shear
- User definable volume & flow path
- Many other configurations available

ANIMAL PHARM SERVICES INCORPORATED

For approximately what universities charge for board and care, we do all the work and deliver the product so you are free to concentrate on research, *not* rabbit wrangling.

Using your peptide or fusion protein, we will supply you with custom polyclonal antibodies.

LabTrak™, our customized software, keeps you totally informed of: injection dates, bleed dates, and shipment dates. You will also receive low antigen notices (one month before needed) and hold notices (monthly when your animal is inactive).

For pricing and delivery information call toll free:

MOLECULAR RESEARCH CENTER, INC. presents **SMART SOLUTIONS**

The most reliable and cost-effective reagents for DNA and RNA isolations. Using separation technology based on the recognition of target molecules by a liquid phase, these innovative reagents outperform traditional DNA and RNA isolation methods. No enzymatic treatments! No columns! No prolonged protocols!

DNAzol™, a new standard of simplicity and effectiveness in the isolation of high quality genomic DNA, developed by P. Chomczynski.

- Requires only 10 - 30 minutes
- Effective with cells, tissue and liquid samples, including blood.
- No phenol or other toxic agents
- Isolated DNA ② is ready for Southern blotting, restriction analysis ①, PCR ③, molecular cloning and other applications.

TRI REAGENT®, the most advanced version of the single-step method of RNA isolation.

- Isolates high quality total RNA in less than one hour
- Can be used to simultaneously isolate RNA, DNA and proteins
- Effective with cells, tissue and liquid samples, including blood.
- Isolated RNA ⑤ is ready for Northern blotting ④, RT-PCR ⑥, and other applications

It's here! It's now!

OptiPrep™

The optimum density gradient medium for isolation of cells, viruses and cell organelles.

- OptiPrep™ permits the purification of all osmotically sensitive particles under iso-osmotic conditions.
- OptiPrep™ facilitates the high resolution and high recovery of biological particles.
- OptiPrep™ forms true solutions of low viscosity. Particles can easily be recovered from OptiPrep™ by sedimentation.
- OptiPrep™ is non-ionic, non-toxic to cells and metabolically inert.
- OptiPrep™ rapidly forms self-generated gradients in vertical and fixed-angle rotors.

ACCURATE

fracture analysis**

©1995 Edge Scientific Instrument Corporation, 1630 17th St., Santa Monica, CA 90404. Covered by one or more of the following patents: U.S.-5,345,333 & 5,305,139; Australia-650,985. Additional U.S. & Foreign patents pending. "Edge" and "Edge Scientific Instruments" are registered trademarks & "Multiple Oblique" is a trademark of Edge Scientific Instrument Corp.

EXAMINING THICK SPECIMENS on a conventional light microscope can be an exercise in compromise. Resolution sacrificed for depth of field. Sharpness sacrificed for contrast.

For thick specimens you need the Edge® R400 light microscope. Unlike an on-axis illuminating beam, Edge's exclusive Multiple Oblique™ off-axis beams carry stray light away from the objective aperture, enhancing depth of field and visual penetration into thick specimens. Contrast improves dramatically through shadows and highlights – ideal for live and unstained preparations. Resolution and sharpness?

Compared to an on-axis beam, Multiple Oblique illumination enables the objective to capture additional higher-order diffraction wavelets, resulting in better resolution and sharpness. With the Edge microscope, thick specimens are worked on, not around.

The Edge R400 also provides true-color, real-time 3D for direct observation and recording. So whether you photograph specimens in 3D or in 2D, you get images superior to those from conventional light microscopes. For our new brochure with handy 3D spectacles, or to set up a demonstration in your own facility, please call **1-800-597-EDGE**.

CELL

MICROSURGERY

N₂ DYE

LASERS

The Laser Science, Inc. **VSL** series of pulsed Nitrogen (337nm) and Dye Lasers (360-950nm) are being used for:

- Ablating single nerve terminals in living mice
- Killing cells and nuclei of *C. elegans*
- Microdissection of *Drosophila* chromosomes
- Laser microsurgery of cell walls in plants
- Ablation of the mesonephros in chick embryos

Using the new Laser Science, Inc. **Microscope Measurement Kit**, we can provide laser-to-microscope adapters for most microscopes. With our new alignment tool setup goes smoothly.

The **VSL** series of lasers are low cost and easy to use. They provide:

- Micron spot sizes for high precision
- Tunable wavelengths from 360 to 950nm to match the absorption spectrum of staining dyes
- No damage to adjacent areas, nonintrusive and contact free

Stop contamination with
this PCR* workstation.

The Template-Tamer™ eliminates
contaminating DNA with ultraviolet light.

Before you add the template and poly-
merase, just place buffers, pipettes, pipette
tips and other plasticware in the unit for 30
minutes. Then use the Template-Tamer™ as
a contamination-free, closed environment.

Keep your PCR experiments pure.
Call 1-800-77-ONCOR.

For research use only. Not for use in diagnostic procedures.
* The Polymerase Chain Reaction (PCR) process is covered
by U.S. patents owned by Hoffmann-La Roche. Use of the
PCR process requires a license.

in this Section!

30 Cycles in 9.5 minutes.

A 536 bp product, from the human beta globin gene is visible in lane 2. The Rapidcycler was programmed for 30 cycles with the following parameters: 94°C for 0 sec; 60°C for 0 sec; 72°C for 5 sec. The reaction was completed in 9 min 25 sec.

INTRODUCING the Rapidcycler

The Rapidcycler performs faster than any other thermal cycler available

and delivers optimum reaction specificity, convenience of operation (no oil overlay), and exceptional reproducibility.

The Rapidcycler features a closed system which ensures decreased contamination.

Optimized for smaller reaction volumes (10-50 μ l capillary format or thin walled micro-centrifuge tubes) the Rapidcycler promises long-term savings by significantly reducing reagent costs.

The Fujix HR Deltaron 1700

Electro-Optical Physiology at 1700 Frames per Second.

Physiologists have long sought to visualize the dynamics of inter-cellular signaling. Now they can. Introducing the HR Deltaron 1700 – a high resolution, fast, and ultra-sensitive differential image acquisition system.

- Designed specifically for use in voltage sensitive dye and ion flow studies.
- Use absorbance or fluorescent dyes.
- Unique MOS sensor allows for rapid data collection (0.6 ms per frame).
- Complete user control over camera operating conditions.
- Stores up to 3000 frames.

- High resolution – 128 x 128 elements (16,384 pixels).
- Very high, signal-to-noise ratio allows detection of less than 0.1% change in signal amplitude.
- Data can be viewed one frame at a time or 12 frames at a time (in sequence or random order).
- Space sequence display shows the cross sectional variation across five consecutive frames.
- Time sequence display shows the variation in pixel signal across consecutive frames (128 or 256).

Minipreps in Minutes with QIAprep

QIAprep Plasmid Kits are the fastest, most economical way to get the best miniprep value for your money. QIAprep Minipreps are:

- Simple - just lyse, bind and elute
- Rapid - 24 preps complete in less than 30 minutes
- Reliable - give consistently high yields

Plasmid DNA purified with QIAprep gives more reliable results in sequencing, restriction analysis and transformation than other preparation methods. QIAprep consistency eliminates tedious and costly repetition of experiments. In addition, QIAprep silica-gel membrane technology means no syringes, and no resin carryover that can affect downstream applications.

QIAprep spin columns now provide two versatile and convenient handling options. They fit into any standard tabletop microcentrifuge or onto luer connectors on QIAvac Manifold (or any other vacuum unit). For higher throughput needs, QIAprep 8-well strips on QIAvac Manifold allow up to 48 minipreps to be completed in under 45 minutes.
